# Brand new Kitting Solution!

From Hurst Green Plastics Ltd

---

International Patents Pending

**Working closely with Aerospace companies around the world, Hurst Green Plastics Ltd have developed a unique and innovative kitting solution like no other!**

Secure, strong, durable and reusable; the new kitting solution has many special features so that you are able to provide your workers, customers and company the most flexible, customizable and cost effective method of supplying parts for any job, and....no more waste!

Ergonomic, user-friendly design will suit suppliers, couriers and users alike!

***Kitting has just entered a whole new level.....!***

Each internal kitbox will have unique security device. All boxes will arrive with a tamper proof lock.

When product is needed, simply slide the lock left and click into place! The lock cannot slide out...

The box now displays green to say "access granted" and the lid easily opens!

The green also allows restockers to see which boxes have been breached. Unbreached parts can quickly go back into stock, re-issued and re-used.

# Brand new Kitting Solution!

From Hurst Green Plastics Ltd

Only the service provider with use of a special "key" can relock boxes for re-issue.

International Patents Pending

There are 3 different sizes of internal boxes to suit a variety of parts, and the boxes have an ergonomic curved base to easily allow removal of the smallest of parts. The ticket flap in the lid allows users to quickly identify the parts they need and barcodes can be displayed. Long parts, cables or connectors can also be catered for using special quick locking catches which hold the parts firmly in place so there is no damage when the kitbox is in transit!

If required, the smallest kitbox can also be split into 2 using the sliding mechanism insert. This allows for even *more* parts to be stored, or 2 related parts can be stored together.

All boxes can be opened whilst positioned within the case to keep work stations tidy and also allows service providers or store managers to easily recreate the kits to the same specification without having to change the layout.

If required though, the boxes can be removed by lifting out of place.

From Hurst Green Plastics Ltd

International Patents Pending

The kitbox case has unique, built in locking base so that the kitboxes 'snap' into place. This also allows any combination and layout of internal kitboxes.

The lid also has a leaflet holder feature so aircraft part certifications, instructions, etc can be securely provided within each kit!

# Brand new Kitting Solution!

From Hurst Green Plastics Ltd

International Patents Pending

Our kitting solution eliminates all the issues currently experienced with current kitting methods. It is also a very green solution as all the parts can be reused over and over again. There is no need for expensive cardboard boxes or plastic bags and it takes the pain and time away from using these!

Benefits include....

- > Secure, lockable and taggable - allowing for complete traceability!
- > Totally configurable, versatile and flexible.
- > Environmental and cross-contamination is eliminated!
- > Multiple kits can be delivered locked together.
- > Environmentally friendly as all packaging waste is eliminated.
- > Durable materials used throughout, ensuring long life usage.
- > Totally complements our TwinBin® and FlagBin® Kanban system.
- > Can be branded with your company logo and details!
- > Rapid payback on investment!
- > Easy to use!
- > Easy to store!
- > Easy to transport!

***Easy to kit!***
